

“ Medical-Objects is an easy way of checking results and reports at ones' convenience and makes mobile medicine a reality ”

*Dr Michael Donovan, MBBS FRACS Surgeon*

#### A Communication Platform for Today

Today, Medical-Objects is used by both Public and Private sector hospitals to securely send and receive patient data such as receiving referrals from Primary Care, sending discharge summaries, event notifications, medication requests and more.

#### A Central Point for Electronic Referral

Central Referral Departments receive electronic referrals and can directly send back acknowledgements or requests for further information.

#### Assisting With Specialists Outpatients

Specialist Outpatient can use Medical-Objects to retrieve pathology results and reports from outside labs and radiology companies, and provider consolidated results for its clinicians. Electronic delivery of data to a single site where it is automatically filed and easily accessible across the network, frees staff to perform other patient-centric duties.

#### Discharge Summaries and Beyond

Discharge summaries sent electronically can only improve patient care as information is disseminated to GP's quickly and securely. However you are able to use the Medical-Objects system for other solutions as well: Medication Requests from GP's; notification of admissions;

deaths; and other events can assist in the communication process.

#### How Medical-Objects Fits Into Your Practice

Medical-Objects allows you to send and receive electronic messages using HL7 messaging standards. All messages are sent securely using

PKI and PGP (Pretty Good Privacy) encryption. Save on scanning, filing, printing and human resources. Medical-Objects has the solution for you.

Our messaging software can interoperate with all popular practice management systems (PMS) for example: Medical Director 3, Genie, Best Practice, Practix, Medical Spectrum, ZedMed, GP Complete, Shexie, The Practice, Remedy, and Total Care plus many more. The messaging software can be configured to download results into your practice management system of choice.

Medical-Objects software has the capability to send referrals and Specialist letters using templates or simple text messages. Many General Practitioner, Specialists and Allied Health software systems can also integrate with Medical-Objects.

General Practitioner referrals are signed with electronic PKI signatures and encrypted using the Referral Client, 'Trinity'. All referrals sent can be tracked using the delivery report.

Specialist and Allied Health can send letters through the Word Plug-in and or the Explorer program. The Word Plug-in integrates directly with Microsoft Word. All messages have the option to be PKI signed if required. All letters sent are tracked and time stamped to ensure delivery, this can be viewed in the delivery report or Medical-Objects Explorer software.

The Medical-Objects software is easy to use and will be of great benefit to your practice workflow. The downloading of results is automated and the software runs quietly in the background.

## Who is Medical-Objects and What Can we Offer You?

### Knowledge, Skills, Tools and Experience

Medical-Objects' experienced team has the knowledge, skills and tools that make health systems connect and work together.

### The Systems that Thousands Depend upon Every Year

For nearly a decade, our team has been working hard to deliver the innovative platform that ensures real solutions are available to the health community. Today Medical-Objects provide connectivity and clinical solutions for thousands of health users around Australia.

### Standards-based Organisation

Medical-Objects are a standards-based organisation, consistently contributing to the national and international standards community. Working with established standards ensures quality solutions that are built at a lower cost of ownership.

### Open and Ethical

The Medical-Objects team work in an open and ethical manner, which helps to build value into our solutions and create strong working customer relationships.

### Pragmatic Solutions

At Medical-Objects we take a pragmatic approach to ensure that the solutions provided are secure, efficient and reliable, whether you are a single practitioner or a large public or private hospital.

### The Sum of the Parts

By building upon open standards, clinical knowledge, health informatics and computer science, Medical-Objects are depended upon by thousands of health professionals nationwide to communicate, collaborate and connect.

## Products and Services

By building a standards-based platform, Medical-Objects allow for the delivery of next generation solutions in the clinical space. The Medical-Objects team have invested considerable resources to ensure that the products and services provided are of the highest standard.

### Communication and Secure Messaging

Medical-Objects is widely acknowledged as a technical leader in secure electronic clinical communications within Australia - the first company to deliver real-time distributed secure communication to the market. Medical-Objects is the first, and still the only organisation to achieve HL7 certification status through the Australian Healthcare Messaging Laboratory.

Our team has integrated some of the most advanced technology into secure messaging system, such as DICOM delivery, automatic updates, Intelligent transformations to XLM/PIT?PDF and our communication clients run on both Windows and Mac OSX platforms.

The Integration of delivery reports provide you with the message tracking, so no information is lost. All correspondence sent via electronic messaging is date and time stamped for your assurance.

### Clinical Software Packages

Building on the strong foundation of clinical messaging, Medical-Objects deliver a range of software solutions. Our suite of products has been tailor-made to suit General Practitioners, Specialists and Allied Health. The clinical software assists Medical professionals by adding efficient and cost effective workflows to their practice.

### Integration Services

Many organisations say that their systems support standards, but when it comes to connecting these systems, there is a significant amount of work involved in order to make this work. Medical-Objects has proven time and again that we are able to connect with a vast array of clinical systems, from practice management system vendors to large multinational health and Information Technology vendors.

### Consulting and knowledge Services

Medical-Objects are experts in various aspects of Health Informatics such as HL7 v2.3.1 messaging, SNOMED CT as well as Solutions Architecture for the Health Industry. This may be as simple as a review of your messaging capability within your organisation; a consultation to discuss effective HL7 or SNOMED CT implementations, or to design a customised decision support system specifically for your needs.
