

for Specialists

“ Medical-Objects is an easy way of checking results and reports at ones' convenience and makes mobile medicine a reality ”

Dr Michael Donovan, MBBS FRACS Surgeon

Improving your Relationship with your Referrers

As a specialist, how you respond to your referrers is often how you are measured. GP's today often require your reports be delivered to them electronically, as this removes the burden and cost of scanning and assists in organising patient information.

However many specialists work in unique ways, from those already utilising a practice management system, to those using a Word processor or to those without a computer altogether.

Towards a Paperless Practice

“Going paperless” is the catch phrase of the moment and Medical-Objects can help you make that a reality. Some doctors are already using the internet to keep in contact with their peers, but privacy and security are lost in a standard email - it is prone to spam and normal email referrals may not be valid according to the Electronic Transactions Act.

A Solution for how you Work

Medical-Objects provide a range of solutions to improve your reporting and communications. We provide tools to send letters/reports generated in Microsoft Word and integrate with other specialists' clinical packages. For those needing a clinical system, Medical-Objects' Premium and Ultra Editions include letter writing, communication, advanced image capture, decision support capabilities, consolidated pathology reporting across multiple labs, viewing diagnostic imaging and report delivery tracking and more.

How Medical-Objects Fits Into Your Practice

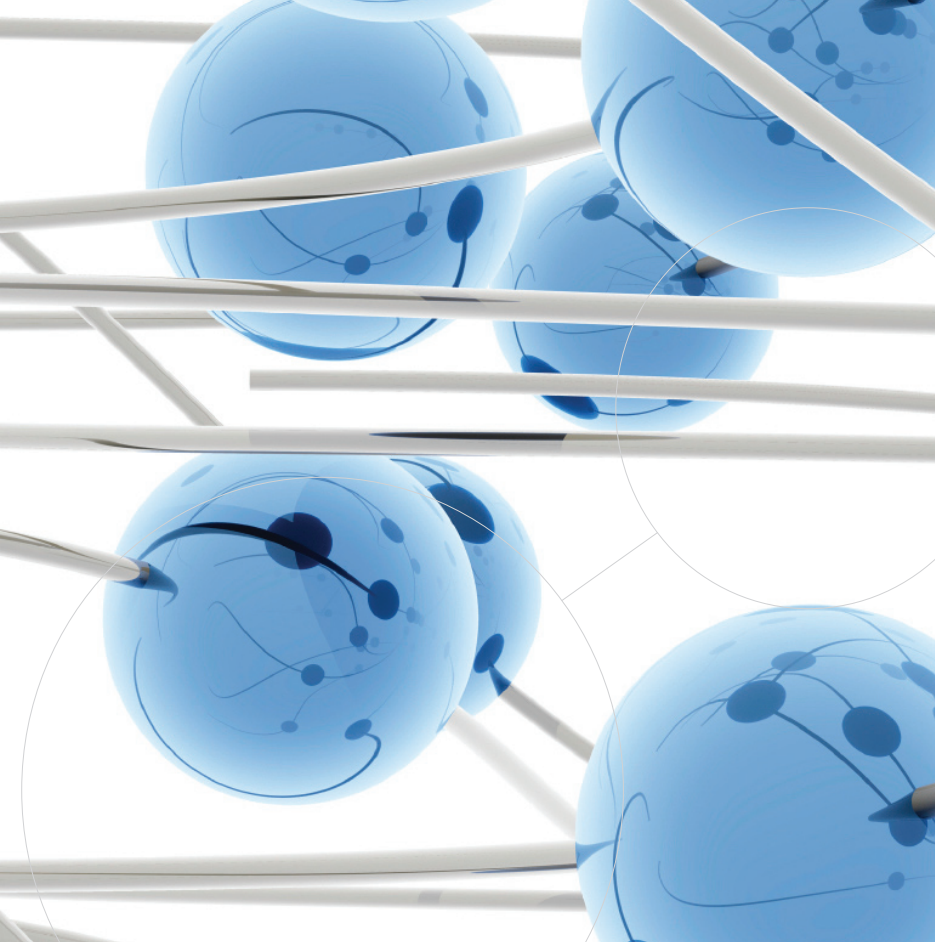

Medical Objects allows you to send and receive electronic messages using HL7 messaging standards. All messages are sent securely using PKI and PGP (Pretty Good Privacy) encryption. Save on scanning, filing, printing and human resources. Medical-Objects has the solution for you.

Our messaging software can interoperate with all popular practice management systems (PMS) for example: Medical Director 2 and 3, Genie, Best Practice, Practix, Medical Spectrum, ZedMed, GP Complete, Shexie, The Practice, Remedy, and Total Care plus many more. The messaging software can be configured to download results into your practice management system of choice.

The Medical-Objects toolkit for GPs also has the capability to send referrals and Specialist letters using templates or free form. Many General Practitioner, Specialists and Allied Health software systems can also integrate with Medical-Objects.

General Practitioner referrals are signed with electronic PKI signatures and encrypted using the Referral Client, 'Trinity'. All referrals sent can be tracked using the delivery report.

The Medical-Objects software is easy to use and will be of great benefit to your practice workflow. The downloading of results is automated and the software runs quietly in the background.

Who is Medical-Objects and What Can we Offer You?

Knowledge, Skills, Tools and Experience

Medical-Objects' experienced team has the knowledge, skills and tools that make health systems connect and work together.

The Systems that Thousands Depend upon Every Year

For nearly a decade, our team has been working hard to deliver the innovative platform that ensures real solutions are available to the health community. Today Medical-Objects provide connectivity and clinical solutions for over ten thousand health professionals throughout Australia.

Standards-based Organisation

Medical-Objects are a standards-based organisation, consistently contributing to the national and international standards community. Working with established standards ensures quality solutions that are built at a lower cost of ownership.

Open and Ethical

The Medical-Objects team work in an open and ethical manner, which helps to build value into our solutions and create strong working customer relationships.

Pragmatic Solutions

At Medical-Objects we take a pragmatic approach to ensure that the solutions provided are secure, efficient and reliable, whether you are a single practitioner or a large public or private hospital.

The Sum of the Parts

By building upon open standards, clinical knowledge, health informatics and computer science, Medical-Objects are depended upon by thousands of health professionals nationwide to communicate, collaborate and connect.

Products and Services

By building a standards-based platform, Medical-Objects allow for the delivery of next generation solutions in the clinical space. The Medical-Objects team have invested considerable resources to ensure that the products and services provided are of the highest standard.

Communication and Secure Messaging

Medical-Objects is widely acknowledged as a technical leader in secure electronic clinical communications within Australia - the first company to deliver real-time distributed secure communication to the market. Medical-Objects is the first, and still the only organisation to achieve HL7 certification status through the Australian Healthcare Messaging Laboratory.

Our team has integrated some of the most advanced technology into secure messaging system, such as DICOM delivery, automatic updates, Intelligent transformations to XML, PIT, PDF and our communication clients run on Windows, Linux and Mac OSX platforms.

The Integration of delivery reports provide you with the message tracking, so no information is lost. All correspondence sent via electronic messaging is date and time stamped for your assurance.

Clinical Software Packages

Building on the strong foundation of clinical messaging, Medical-Objects deliver a range of software solutions. Our suite of products has been tailor-made to suit General Practitioners, Specialists, Allied Health and others. The clinical software assists Medical professionals by adding efficient and cost effective workflows to their practice.

Integration Services

Many organisations say that their systems support standards, but when it comes to connecting these systems, there is a significant amount of work involved in order to make it work. Medical-Objects has proven time and again that we are able to connect with a vast array of clinical systems, from practice management system vendors to large multinational health and Information Technology vendors.

Consulting and knowledge Services

Medical-Objects are experts in various aspects of Health Informatics such as HL7 v2.3.1 messaging, SNOMED CT as well as Solutions Architecture for the Health Industry. This may be as simple as a review of your messaging capability within your organisation; a consultation to discuss effective HL7 or SNOMED CT implementations, or to design a customised decision support system specifically for your needs.
